INSTRUCTION MANUAL

LLAC4 Four-Channel, Low-Level AC Conversion Module

Revision: 3/12

Warranty

"PRODUCTS MANUFACTURED BY CAMPBELL SCIENTIFIC, INC. are warranted by Campbell Scientific, Inc. ("Campbell") to be free from defects in materials and workmanship under normal use and service for twelve (12) months from date of shipment unless otherwise specified in the corresponding Campbell pricelist or product manual. Products not manufactured, but that are re-sold by Campbell, are warranted only to the limits extended by the original manufacturer. Batteries, fine-wire thermocouples, desiccant, and other consumables have no warranty. Campbell's obligation under this warranty is limited to repairing or replacing (at Campbell's option) defective products, which shall be the sole and exclusive remedy under this warranty. The customer shall assume all costs of removing, reinstalling, and shipping defective products to Campbell. Campbell will return such products by surface carrier prepaid within the continental United States of America. To all other locations, Campbell will return such products best way CIP (Port of Entry) INCOTERM® 2010, prepaid. This warranty shall not apply to any products which have been subjected to modification, misuse, neglect, improper service, accidents of nature, or shipping damage. This warranty is in lieu of all other warranties, expressed or implied. The warranty for installation services performed by Campbell such as programming to customer specifications, electrical connections to products manufactured by Campbell, and product specific training, is part of Campbell's product warranty. CAMPBELL EXPRESSLY DISCLAIMS AND EXCLUDES ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Campbell is not liable for any special, indirect, incidental, and/or consequential damages."

Assistance

Products may not be returned without prior authorization. The following contact information is for US and international customers residing in countries served by Campbell Scientific, Inc. directly. Affiliate companies handle repairs for customers within their territories. Please visit *www.campbellsci.com* to determine which Campbell Scientific company serves your country.

To obtain a Returned Materials Authorization (RMA), contact CAMPBELL SCIENTIFIC, INC., phone (435) 227-9000. After an applications engineer determines the nature of the problem, an RMA number will be issued. Please write this number clearly on the outside of the shipping container. Campbell Scientific's shipping address is:

CAMPBELL SCIENTIFIC, INC.
RMA#_____
815 West 1800 North
Logan, Utah 84321-1784

For all returns, the customer must fill out a "Statement of Product Cleanliness and Decontamination" form and comply with the requirements specified in it. The form is available from our web site at *www.campbellsci.com/repair*. A completed form must be either emailed to *repair@campbellsci.com* or faxed to (435) 227-9106. Campbell Scientific is unable to process any returns until we receive this form. If the form is not received within three days of product receipt or is incomplete, the product will be returned to the customer at the customer's expense. Campbell Scientific reserves the right to refuse service on products that were exposed to contaminants that may cause health or safety concerns for our employees.

LLAC4 Four-Channel, Low-Level AC Conversion Module

1. General Description

The LLAC4 is a peripheral device used to increase the number of low-level AC signals a datalogger can monitor. The module enables four datalogger control ports to emulate pulse-counting channels by converting the low-level AC signals to the logic levels datalogger control ports require.

The LLAC4 is often used to measure up to four anemometers, and is especially useful for wind profiling applications. Compatible wind sensors include, but are not limited to, the 05103 Wind Monitor, 05106 Wind Monitor-MA, 05305 Wind Monitor-AQ, 03001 Wind Sentry Set, and 03101 Wind Sentry Anemometer.

FIGURE 1. LLAC4 four-channel, low-level AC conversion module

2. Specifications

Power: 8 to 16 Vdc
0.1 mA @ 12 Vdc

Signal Conditioning: **Minimum AC Input Voltage versus Output Square Wave Frequency:**

Input Sine Wave (mV RMS)	Output Square Wave Range (Hz)
20	1.0 to 20
200	0.5 to 200
2000	0.3 to 10,000
5000	0.3 to 20,000

AC Coupling Removes DC Offset: up to ±0.5V

Input Hysteresis: 16 mV @ 1 Hz

Max AC Input Voltage: ±20 V

Dimensions: 8.0 W x 5.4 H x 2.5 D cm
(3.1 in x 2.1 in x 1.0 in)

11.2 W x 5.4 H x 2.5 D cm
(4.5 in x 2.1 in x 1.0 in)
including base mounting flange

Cable Length 0.6 m (2 ft)

Weight: 92 g (3.2 oz)

3. Measurements

Sensors, such as anemometers, may produce a sinusoidal AC signal output where the frequency is proportional to the speed of rotation. This AC signal is induced in a stationary coil by a magnet mounted on a rotating shaft.

The datalogger's pulse channels can read this low-level AC signal directly. The LLAC4 has signal conditioning to convert the low-level AC to a 0 to 5 volt square wave that can be measured on the datalogger's control ports. The frequency response of the LLAC4 is the same as the low-level AC on the pulse inputs.

Typically, propeller type anemometers operate at higher frequencies than cup anemometers at the same wind speed (see Table 1).

TABLE 1. Sensor Output Frequencies

Sensor	Output @ 50m/s	Type
05103	510Hz	Propeller
03101	67Hz	Cup

The datalogger must also be able to read these high frequency pulses on its control ports. Table 2 shows some common dataloggers and their compatible control port specifications.

TABLE 2. Control Port Compatibility			
Datalogger	**Input (Hz)**	**Control Port**	**Measurement Type**
CR1000 CR3000	400,000	C1,C2… C8	High Frequency
CR800	400,000	C1,C2,C3,C4	High Frequency
CR5000	5,000,000	C7,C8	High Frequency
CR23X	2,500	C5,C6,C7,C8	High Frequency
CR200(X)	1,000	P_LL,P_SW,C1,C2	High Frequency
CR10X	40	C6,C7,C8	Switch Closure

Comparing Table 1 to Table 2 suggests that the CR10X may not be able to read either type of anemometer in high wind situations. However, all other dataloggers would be appropriate choices.

4. Wiring

Most sensors that have a low-level AC output will have three wires: signal, reference, and drain. The signal wire should go to P1 – P4 on the LLAC4 and the reference and drain wires to a ⏚ on the LLAC4. The LLAC4 also requires that 12 V be applied to its 12 V terminal and G. This power should come from the datalogger or the datalogger's power supply.

A low-level AC signal on P1 will be converted to a 0-5 V square wave on the D1 terminal. D1 can be wired to an appropriate datalogger control port that can make high frequency measurements.

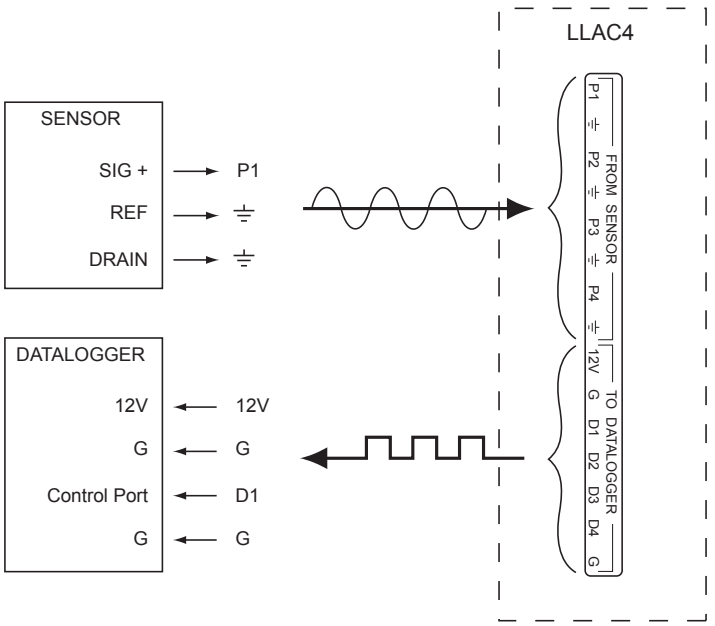

FIGURE 2. LLAC to TTL

5. Program Examples

Using the CR1000, let's measure four different wind speed sensors that produce low-level AC signals. These will include the RM Young 05103, 05106, 05305, propeller type anemometers, and RM Young 03101 cup anemometer. Program examples are provided for both the CR1000 and the CR200(X).

Wiring						
Sensor			**LLAC4**		**CR1000**	**CR200(X)**
05103-L	Sig +	Red	P1			
	Ref	Black	⏚			
	Drain	Clear	⏚			
05106-L	Sig +	Red	P2			
	Ref	Black	⏚			
	Drain	Clear	⏚			
05305-L	Sig +	Red	P3			
	Ref	Black	⏚			
	Drain	Clear	⏚			
03101-L	Sig +	Black	P4			
	Ref	White	⏚			
	Drain	Clear	⏚			
			12 V	Red	12 V	Battery +
			G	Black	G	G
			D1	White	C5	PLL
			D2	Green	C6	C1/SDI-12
			D3	Yellow	C7	C2
			D4	Blue	C8	P_SW
			G	Clear	G	G
