Overview

The CR300 and CR310 are multi-purpose, compact, low-cost measurement and control dataloggers that are ideal for small applications requiring long-term, remote monitoring and control. These entry-level dataloggers, with their rich instruction set, can measure most hydrological, meteorological, environmental and industrial sensors. They will concentrate data, making the data available over varied networks and deliver the data using your preferred protocol. The CR300-series dataloggers also perform automated on-site or remote decision making for control and M2M communications.

The CR310 is longer than the CR300 and includes an integrated 10/100 Ethernet port and removable terminal connectors.
