Solar Radiation Sensor Mounts

015ARM, CM225, CM226, CM255, CM255LS, CM260, and CM265
Guarantee

This equipment is guaranteed against defects in materials and workmanship. We will repair or replace products which prove to be defective during the guarantee period as detailed on your invoice, provided they are returned to us prepaid. The guarantee will not apply to:

- Equipment which has been modified or altered in any way without the written permission of Campbell Scientific
- Batteries
- Any product which has been subjected to misuse, neglect, acts of God or damage in transit.

Campbell Scientific will return guaranteed equipment by surface carrier prepaid. Campbell Scientific will not reimburse the claimant for costs incurred in removing and/or reinstalling equipment. This guarantee and the Company’s obligation thereunder is in lieu of all other guarantees, expressed or implied, including those of suitability and fitness for a particular purpose. Campbell Scientific is not liable for consequential damage.

Please inform us before returning equipment and obtain a Repair Reference Number whether the repair is under guarantee or not. Please state the faults as clearly as possible, and if the product is out of the guarantee period it should be accompanied by a purchase order. Quotations for repairs can be given on request. It is the policy of Campbell Scientific to protect the health of its employees and provide a safe working environment, in support of this policy a “Declaration of Hazardous Material and Decontamination” form will be issued for completion.

When returning equipment, the Repair Reference Number must be clearly marked on the outside of the package. Complete the “Declaration of Hazardous Material and Decontamination” form and ensure a completed copy is returned with your goods. Please note your Repair may not be processed if you do not include a copy of this form and Campbell Scientific Ltd reserves the right to return goods at the customers’ expense.

Note that goods sent air freight are subject to Customs clearance fees which Campbell Scientific will charge to customers. In many cases, these charges are greater than the cost of the repair.
PLEASE READ FIRST

About this manual

Please note that this manual was originally produced by Campbell Scientific Inc. primarily for the North American market. Some spellings, weights and measures may reflect this origin.

Some useful conversion factors:

<table>
<thead>
<tr>
<th>Area:</th>
<th>1 in² (square inch) = 645 mm²</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mass:</td>
<td>1 oz. (ounce) = 28.35 g</td>
</tr>
<tr>
<td></td>
<td>1 lb (pound weight) = 0.454 kg</td>
</tr>
<tr>
<td>Length:</td>
<td>1 in. (inch) = 25.4 mm</td>
</tr>
<tr>
<td></td>
<td>1 ft (foot) = 304.8 mm</td>
</tr>
<tr>
<td></td>
<td>1 yard = 0.914 m</td>
</tr>
<tr>
<td></td>
<td>1 mile = 1.609 km</td>
</tr>
<tr>
<td>Pressure:</td>
<td>1 psi (lb/in²) = 68.95 mb</td>
</tr>
<tr>
<td>Volume:</td>
<td>1 UK pint = 568.3 ml</td>
</tr>
<tr>
<td></td>
<td>1 UK gallon = 4.546 litres</td>
</tr>
<tr>
<td></td>
<td>1 US gallon = 3.785 litres</td>
</tr>
</tbody>
</table>

In addition, while most of the information in the manual is correct for all countries, certain information is specific to the North American market and so may not be applicable to European users.

Differences include the U.S standard external power supply details where some information (for example the AC transformer input voltage) will not be applicable for British/European use. Please note, however, that when a power supply adapter is ordered it will be suitable for use in your country.

Reference to some radio transmitters, digital cell phones and aerials may also not be applicable according to your locality.

Some brackets, shields and enclosure options, including wiring, are not sold as standard items in the European market; in some cases alternatives are offered. Details of the alternatives will be covered in separate manuals.

Part numbers prefixed with a “#” symbol are special order parts for use with non-EU variants or for special installations. Please quote the full part number with the # when ordering.

Recycling information

At the end of this product’s life it should not be put in commercial or domestic refuse but sent for recycling. Any batteries contained within the product or used during the products life should be removed from the product and also be sent to an appropriate recycling facility.

Campbell Scientific Ltd can advise on the recycling of the equipment and in some cases arrange collection and the correct disposal of it, although charges may apply for some items or territories.

For further advice or support, please contact Campbell Scientific Ltd, or your local agent.
Safety

DANGER — MANY HAZARDS ARE ASSOCIATED WITH INSTALLING, USING, MAINTAINING, AND WORKING ON OR AROUND TRIPODS, TOWERS, AND ANY ATTACHMENTS TO TRIPODS AND TOWERS SUCH AS SENSORS, CROSSARMS, ENCLOSURES, ANTENNAS, ETC. FAILURE TO PROPERLY AND COMPLETELY ASSEMBLE, INSTALL, OPERATE, USE, AND MAINTAIN TRIPODS, TOWERS, AND ATTACHMENTS, AND FAILURE TO HEED WARNINGS, INCREASES THE RISK OF DEATH, ACCIDENT, SERIOUS INJURY, PROPERTY DAMAGE, AND PRODUCT FAILURE. TAKE ALL REASONABLE PRECAUTIONS TO AVOID THESE HAZARDS. CHECK WITH YOUR ORGANIZATION'S SAFETY COORDINATOR (OR POLICY) FOR PROCEDURES AND REQUIRED PROTECTIVE EQUIPMENT PRIOR TO PERFORMING ANY WORK.

Use tripods, towers, and attachments to tripods and towers only for purposes for which they are designed. Do not exceed design limits. Be familiar and comply with all instructions provided in product manuals. Manuals are available at www.campbellsci.eu or by telephoning +44(0) 1509 828 888 (UK). You are responsible for conformance with governing codes and regulations, including safety regulations, and the integrity and location of structures or land to which towers, tripods, and any attachments are attached. Installation sites should be evaluated and approved by a qualified engineer. If questions or concerns arise regarding installation, use, or maintenance of tripods, towers, attachments, or electrical connections, consult with a licensed and qualified engineer or electrician.

General

• Prior to performing site or installation work, obtain required approvals and permits. Comply with all governing structure-height regulations, such as those of the FAA in the USA.
• Use only qualified personnel for installation, use, and maintenance of tripods and towers, and any attachments to tripods and towers. The use of licensed and qualified contractors is highly recommended.
• Read all applicable instructions carefully and understand procedures thoroughly before beginning work.
• Wear a hardhat and eye protection, and take other appropriate safety precautions while working on or around tripods and towers.
• Do not climb tripods or towers at any time, and prohibit climbing by other persons. Take reasonable precautions to secure tripod and tower sites from trespassers.
• Use only manufacturer recommended parts, materials, and tools.

Utility and Electrical

• You can be killed or sustain serious bodily injury if the tripod, tower, or attachments you are installing, constructing, using, or maintaining, or a tool, stake, or anchor, come in contact with overhead or underground utility lines.
• Maintain a distance of at least one-and-one-half times structure height, or 20 feet, or the distance required by applicable law, whichever is greater, between overhead utility lines and the structure (tripod, tower, attachments, or tools).
• Prior to performing site or installation work, inform all utility companies and have all underground utilities marked.
• Comply with all electrical codes. Electrical equipment and related grounding devices should be installed by a licensed and qualified electrician.

Elevated Work and Weather

• Exercise extreme caution when performing elevated work.
• Use appropriate equipment and safety practices.
• During installation and maintenance, keep tower and tripod sites clear of un-trained or non-essential personnel. Take precautions to prevent elevated tools and objects from dropping.
• Do not perform any work in inclement weather, including wind, rain, snow, lightning, etc.

Maintenance

• Periodically (at least yearly) check for wear and damage, including corrosion, stress cracks, frayed cables, loose cable clamps, cable tightness, etc. and take necessary corrective actions.
• Periodically (at least yearly) check electrical ground connections.

WHILE EVERY ATTEMPT IS MADE TO EMBODY THE HIGHEST DEGREE OF SAFETY IN ALL CAMPBELL SCIENTIFIC PRODUCTS, THE CUSTOMER ASSUMES ALL RISK FROM ANY INJURY RESULTING FROM IMPROPER INSTALLATION, USE, OR MAINTENANCE OF TRIPODS, TOWERS, OR ATTACHMENTS TO TRIPODS AND TOWERS SUCH AS SENSORS, CROSSARMS, ENCLOSURES, ANTENNAS, ETC.

Solar Radiation Sensor Mounts

1. Introduction

The 015ARM, CM225, CM255, CM255LS, CM260, and CM265 solar radiation sensor mounts (FIGURE 1-1) are designed to be mounted on a mast, crossarm, or pole. The mounting holes on the top plate allow a wide variety of sensors to be mounted.

The CM226 is designed to mount on a mast, crossarm, or pole up to 5 cm (2 in) diameter. This mount includes the levelling base required by smaller sensors such as the Apogee CS301.

The 015ARM mounts to a vertical mast or tripod. The CM225 and CM226 are designed to be mounted either horizontally to a crossarm or vertically to a mast or a pole to keep the mounting plate level. The CM255 and CM255LS can also be mounted horizontally or vertically, but include a 90° adjustment. This allows the mount to be positioned and different angles, as shown in FIGURE 4-1. The CM260 is designed specifically for securing a pyranometer near the end cap of an ATI Torque Tube, and it can be used with any other 12.7 cm (5 in) diameter tube. The CM265 has been specifically designed for the limited space near the end cap of the NEXTracker Torque Tube, and it can be used with any other 12.7 cm (5 in) diameter tube.

FIGURE 1-1. Pyranometer mounting brackets
2. **Precautions**

- READ AND UNDERSTAND the Safety section at the front of this manual.

- WARNING — Ensure the mounting bracket is securely fastened during setup and weather extremes to minimize the chance of damaging the instruments. Read all instructions carefully.

3. **Initial Inspection**

- Upon receiving the solar radiation sensor mount, inspect the packaging and contents for damage. Claims for shipping damage must be filed with the shipping company.

- Locate the packing slip for the order and compare the items listed on the packing slip to the items that were actually shipped. Report any discrepancies to Campbell Scientific.

4. **Overview**

Campbell Scientific solar radiation sensor mounts provide a stable mounting platform for a pyranometer, quantum sensor, or radiometer. The flexibility in these designs allows a sensor to be mounted to a horizontal crossarm, or to a vertical mast or tower. With the 015ARM, the sensor is mounted away from the vertical pipe, allowing for a more unobstructed view of the sky. The CM255 and CM255LS may be mounted at different angles, depending on the user’s needs (FIGURE 4-1).

*FIGURE 4-1. CM255 mounted level and at an angle*
## 5. Specifications

<table>
<thead>
<tr>
<th>Mount</th>
<th>Description</th>
<th>Compatible Sensors[^1]</th>
<th>Mounts to</th>
</tr>
</thead>
<tbody>
<tr>
<td>015ARM Solar Sensor Mounting Arm</td>
<td>Consists of a square platform, mounting arm, and mounting hardware. Platform area is 15.2 x 15.2 cm (6.0 x 6.0 in), arm length is 106.7 cm (42.0 in), and weight is 2.5 kg (5.5 lb).</td>
<td>CS300^2, LI200X^2, LI200S^2, LI190R^2, LI190SB^2, CMP3, CMP6^3, CMP11^3, CMP21^3, LP02</td>
<td>tripod or tower mast or user-supplied pipe with 1 in. to 1.5 in. OD</td>
</tr>
<tr>
<td>CM225 Solar Sensor Mounting Stand</td>
<td>Consists of a rectangular plate, mounting bracket, and mounting hardware. Dimensions are 8.9 x 11.3 x 6.4 cm (3.5 x 4.5 x 2.5 in), and weight is 0.34 kg (0.75 lb).</td>
<td>CS300^2, LI200X^2, LI200S^2, LI190R^2, LI190SB^2, CMP3, CMP6^3, CMP11^3, CMP21^3, LP02, SP-LITE, PQS1</td>
<td>U-bolt in bottom holes CM202, CM202SS, CM203, CM204, CM204SS, or CM206 crossarm U-bolt in side holes tripod or tower mast or user-supplied pipe with 1 in. to 1.5 in. OD</td>
</tr>
<tr>
<td>CM226 Solar Sensor Mounting Stand with Level and Base</td>
<td>Designed for Apogee solar sensors, this mount combines the levelling and mounting hardware needed to install the sensor. Dimensions are 15.24 x 9.14 x 9.14 cm (6.0 x 3.6 x 3.6 in), and weight is 0.36 kg (0.8 lb).</td>
<td>CS300, CS301, CS310, SP230SS</td>
<td>CM300, CM305, CM310, or any crossarm, mast, or user-supplied pipe with a 5 cm (2 in) OD or smaller</td>
</tr>
<tr>
<td>CM255 Adjustable Angle, Mounting Stand</td>
<td>Includes slots that can be adjusted to any angle from horizontal to vertical. Dimensions are 15.88 x 10.8 x 9.53 cm (6.25 x 4.25 x 3.75 in), and weight is 0.57 kg (1.25 lb).</td>
<td>CS300^2, LI200X^2, LI200S^2, LI190R^2, LI190SB^2, CMP3, CMP6^3, CMP11^3, CMP21^3, LP02, SP-LITE, PQS1 (not compatible with rotating shadowband radiometers (RSRs))</td>
<td>CM202, CM202SS, CM203, CM204, CM204SS, or CM206 crossarm, mast, or user-supplied pipe with a 1.0 in. to 1.5 in. OD</td>
</tr>
</tbody>
</table>

[^1]: CS300, CS301, CS310, SP230SS are compatible sensors for the mounts mentioned.

</tbody>
</table>

1. Retired sensors may also be compatible. Contact Campbell Scientific for more information.
2. A levelling base is required to mount the CS300, LI200X, LI200S, LI190R, or LI190SB.
3. Assumes the CMP6, CMP11, and CMP21 are not housed in the CVF4 Heater/Ventilation Unit.
4. Assumes the SR20-T2-L is not housed in the VU01 Heater/Ventilation Unit.
6. Installation

6.1 Siting

The solar radiation sensor is usually installed horizontally, but can also be installed at any angle including an inverted position. In all cases, it will measure the flux that is incident on the surface that is parallel to the sensor surface. Site the sensor to allow easy access for maintenance while ideally avoiding any obstructions or reflections above the plane of the sensing element. It is important to mount the sensor such that a shadow or a reflection will not be cast on it at any time. FIGURE 6-1 shows how to calculate the distance needed from any potential obstruction, using the CMP3 as an example.

![Solar sensor placement diagram]

**FIGURE 6-1. Solar sensor placement**

If this is not possible, try to choose a site where any obstruction over the azimuth range between earliest sunrise and latest sunset has an elevation not exceeding 5°. Diffuse solar radiation is less influenced by obstructions near the horizon. For instance, an obstruction with an elevation of 5° over the whole azimuth range of 360° decreases the downward diffuse solar radiation by only 0.8%. The sensor should be mounted with the cable pointing towards the nearest magnetic pole. For example, in the northern hemisphere, point the cable toward the North Pole.
6.2 Installation

1. On a level surface, level the solar radiation sensor using the levelling feet on the sensor. Alternatively, remove the sensor levelling feet to allow it to be mounted directly to the mounting bracket. Smaller sensors, such as the CS301, do not have levelling feet and must be mounted directly to a levelling base. The CM226 includes the levelling base. Refer to Section 5, Specifications (p. 3), for a list of sensors compatible with the CM226.

2. Secure the solar radiation sensor to the mounting bracket. Refer to FIGURE 6-2 to determine which mounting holes are used by the sensor. Visually inspect the levelling feet on the sensor (if present) to ensure all feet are in contact with the mounting bracket.

![Diagram of mounting hole locations for solar sensors](image)

**FIGURE 6-2. Mounting hole locations for solar sensors**

3. Using a diopter in combination with a solar compass, install and orient the crossarm on the tripod or the mast. If installing the mounting bracket on a vertical pole, ensure the pole is truly vertical.

4. Secure the mounting bracket to the crossarm or the vertical pole using the hardware included with the mounting bracket. The 015ARM, CM225, CM255, CM260, and CM265 use one or two U-bolts, nuts, flat washers, and lock washers to mount the bracket (FIGURE 6-3).
FIGURE 6-3. 015ARM and CM255 showing U-bolt mounting
5. The CM255LS bracket (FIGURE 6-4) uses two set screws to secure the crossarm or the pole in the channel at the base of the bracket. For pyranometers mounted horizontally, ensure the mounting bracket is horizontal in two dimensions. For pyranometers to be mounted at an angle with the CM255 or CM255LS, set the mounting bracket angle to the desired angle prior to tightening the mounting hardware.

![CM255LS Diagram](image)

**FIGURE 6-4. CM255LS**

6. The CM226 uses two bolts, wing nuts, and a clamp piece to secure it to a crossarm or mast (FIGURE 6-5).
7. **Maintenance**

Periodically (at least yearly) check for wear and damage, and take necessary corrective actions. Ensure all bolts are securely tightened.
