# Campbell Scientific Training Courses

Hands-On Training to Empower Your Success

**Training courses are a great way to get to know your Campbell Scientific product.** Whether you are a beginner or a more advanced user, our training courses offer something for everyone. Our courses are designed to enable you to get the most out of your product, helping you understand and apply the core concepts related to programming and communicating to and from sensors and systems with a Campbell Scientific data logger. Combining theoretical discussion with practical, hands-on programming, you will be able to apply your new-found skills in real-world scenarios in the safety of a classroom.

## Choose a Campbell Scientific course.

Acquire transferable skills needed in the data-acquisition industry.

Measurement concepts are universal, and Campbell Scientific equipment is widely used around the world across academia, industry, and research.

Our personalized course instruction makes these powerful systems easier to understand and more accessible, allowing you to make the most of your monitoring equipment.

## Help staff manage existing networks.

For employers, the more people who know how to use new and existing equipment, the better. Spread the knowledge across core staff to widen the knowledge pool and create better solutions.

For employees, increased confidence in using the equipment leads to better results in the field: more effective troubleshooting, more accurate data acquisition, and, ultimately, better data.

## What People Have to Say

"I learned lots about methods of communication that I wasn't expecting. The trainer was very knowledgeable and had a clear and approachable teaching method. Great."

"The training room and facilities provided were excellent. The trainer was a first-class specialist for sure."

"The trainer was the best I have ever met. We got more than expected from Campbell. Thank you very much for the course and hospitality."

"It was extremely useful to get hands-on experience with a variety of instruments and learn how to use them with the logger."
