

## Aperçu

The 03001 measured wind speed and direction. It interfaced directly with Campbell dataloggers; no signal conditioning required.

## Description technique

The 03001 Wind Sentry Set was replaced with the 03002 Wind Sentry Set on January 9, 2009. The 03001 and 03002 use the same vane and anemometer. However the 03002 includes a junction box allowing one cable to connect the

entire wind set to the datalogger. The retired 03001 used two cables—one for the anemometer and one for the wind vane.
