Overview
The AP200 is a complete, integrated CO₂ and H₂O atmospheric profile system. It measures carbon dioxide (CO₂) and water vapour (H₂O) concentration from up to eight intakes, which are normally spaced along the height of a tower to give a vertical profile. The AP200 is often used in conjunction with an eddy-covariance system to measure the storage term and give a more complete measure of the surface gas exchange.

Benefits and Features
- Provides a fully integrated system
- Requires only 13 W (average at 25 °C and 12 Vdc)
- Contains a Campbell Scientific CR1000 Measurement and Control Datalogger
- Automatically performs CO₂ span and zero
- Automated temperature and pressure control
- Datalogger program included

Measurements
Primary:
- CO₂ concentration at each intake
- H₂O concentration at each intake
- System diagnostic word

Secondary:
- Sample flow rate
