Crossarms provide a rugged attachment point for securing meteorological sensors, antennas, and other peripherals to our tripods and towers. They place sensors a few feet away from the midline of the tower or tripod, thereby serving to reduce the effects of the mount on the sensor measurement. Sensors or peripherals are mounted to the end of the crossarm using an appropriate mount (see General Mounts, Solar Radiation Mounts, and Solar Radiation Shields brochures).

The specifications for the CM210 and CMB200 are listed on page 2. One CM210 mounting bracket kit is included with each crossarm. The CM210 uses U-bolts to mount the crossarm to a mast, tower leg, or user-supplied vertical pipe. An additional CM210 can be purchased to secure the crossarm to two of the three vertical risers within the tower. The CMB200 is a brace that adds structural support to our crossarms.

* The tripods, towers, and vertical pipes that the crossarms can attach to are listed in the CM210 specifications on page 2.
### ACCESSORIES SPECIFICATIONS

#### CM210 | Crossarm-to-Pole Bracket

One CM210 is shipped with each of our crossarms to attach the crossarm to a tripod, tower, or mounting pole. A second CM210 can be purchased to secure the crossarm to two of the three vertical risers within a tower.

- **Weight**: 0.66 kg (1.45 lb)
- **Dimensions**: 10.2 x 12.07 x 0.64 cm (4 x 4.75 x 0.25 in)
- **Material**: 304 stainless steel with stainless-steel U-bolts and hardware
- **Attaches to**: tripod or tower mast, tower leg, or user-supplied vertical pipe (1.0 in. to 2.1 in. OD)

#### CMB200 | Crossarm Brace Kit

Adds structural support for a crossarm.

- **Length**: 0.9 m (2.8 ft)
- **Outer Diameter**: 2.54 cm (1 in)
- **Material**: 304 stainless-steel pipe with 304 stainless-steel brackets
- **Attaches to**: One End CM200-series crossarm
- **Other End**: tripod or tower mast, tower leg, or user-supplied vertical pipe (1.0, 1.25, 1.31, or 1.9 in. OD)
