"Products manufactured by CSI are warranted by CSI to be free from defects in materials and workmanship under normal use and service for twelve months from the date of shipment unless otherwise specified in the corresponding product manual. (Product manuals are available for review online at www.campbellsci.com.) Products not manufactured by CSI, but that are resold by CSI, are warranted only to the limits extended by the original manufacturer. Batteries, fine-wire thermocouples, desiccant, and other consumables have no warranty. CSI's obligation under this warranty is limited to repairing or replacing (at CSI's option) defective Products, which shall be the sole and exclusive remedy under this warranty. The Customer assumes all costs of removing, reinstalling, and shipping defective Products to CSI. CSI will return such Products by surface carrier prepaid within the continental United States of America. To all other locations, CSI will return such Products best way CIP (port of entry) per Incoterms ® 2010. This warranty shall not apply to any Products which have been subjected to modification, misuse, neglect, improper service, accidents of nature, or shipping damage. This warranty is in lieu of all other warranties, expressed or implied. The warranty for installation services performed by CSI such as programming to customer specifications, electrical connections to Products manufactured by CSI, and Product specific training, is part of CSI's product warranty. CSI EXPRESSLY DISCLAIMS AND **EXCLUDES ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. CSI hereby disclaims,** to the fullest extent allowed by applicable law, any and all warranties and conditions with respect to the Products, whether express, implied or statutory, other than those expressly provided herein."

Assistance

Products may not be returned without prior authorization. The following contact information is for US and international customers residing in countries served by Campbell Scientific, Inc. directly. Affiliate companies handle repairs for customers within their territories. Please visit *www.campbellsci.com* to determine which Campbell Scientific company serves your country.

To obtain a Returned Materials Authorization (RMA), contact CAMPBELL SCIENTIFIC, INC., phone (435) 227-9000. Please write the issued RMA number clearly on the outside of the shipping container. Campbell Scientific's shipping address is:

CAMPBELL SCIENTIFIC, INC. RMA#

815 West 1800 North Logan, Utah 84321-1784

For all returns, the customer must fill out a "Statement of Product Cleanliness and Decontamination" form and comply with the requirements specified in it. The form is available from our website at *www.campbellsci.com/repair*. A completed form must be either emailed to *repair@campbellsci.com* or faxed to (435) 227-9106. Campbell Scientific is unable to process any returns until we receive this form. If the form is not received within three days of product receipt or is incomplete, the product will be returned to the customer at the customer's expense. Campbell Scientific reserves the right to refuse service on products that were exposed to contaminants that may cause health or safety concerns for our employees.

Safety

DANGER — MANY HAZARDS ARE ASSOCIATED WITH INSTALLING, USING, MAINTAINING, AND WORKING ON OR AROUND **TRIPODS, TOWERS, AND ANY ATTACHMENTS TO TRIPODS AND TOWERS SUCH AS SENSORS, CROSSARMS, ENCLOSURES, ANTENNAS, ETC**. FAILURE TO PROPERLY AND COMPLETELY ASSEMBLE, INSTALL, OPERATE, USE, AND MAINTAIN TRIPODS, TOWERS, AND ATTACHMENTS, AND FAILURE TO HEED WARNINGS, INCREASES THE RISK OF DEATH, ACCIDENT, SERIOUS INJURY, PROPERTY DAMAGE, AND PRODUCT FAILURE. TAKE ALL REASONABLE PRECAUTIONS TO AVOID THESE HAZARDS. CHECK WITH YOUR ORGANIZATION'S SAFETY COORDINATOR (OR POLICY) FOR PROCEDURES AND REQUIRED PROTECTIVE EQUIPMENT PRIOR TO PERFORMING ANY WORK.

Use tripods, towers, and attachments to tripods and towers only for purposes for which they are designed. Do not exceed design limits. Be familiar and comply with all instructions provided in product manuals. Manuals are available at www.campbellsci.com or by telephoning (435) 227-9000 (USA). You are responsible for conformance with governing codes and regulations, including safety regulations, and the integrity and location of structures or land to which towers, tripods, and any attachments are attached. Installation sites should be evaluated and approved by a qualified engineer. If questions or concerns arise regarding installation, use, or maintenance of tripods, towers, attachments, or electrical connections, consult with a licensed and qualified engineer or electrician.

General

- Prior to performing site or installation work, obtain required approvals and permits. Comply with all governing structure-height regulations, such as those of the FAA in the USA.
- Use only qualified personnel for installation, use, and maintenance of tripods and towers, and any attachments to tripods and towers. The use of licensed and qualified contractors is highly recommended.
- Read all applicable instructions carefully and understand procedures thoroughly before beginning work.
- Wear a hardhat and eye protection, and take other appropriate safety precautions while working on or around tripods and towers.
- **Do not climb** tripods or towers at any time, and prohibit climbing by other persons. Take reasonable precautions to secure tripod and tower sites from trespassers.
- Use only manufacturer recommended parts, materials, and tools.

Utility and Electrical

- You can be killed or sustain serious bodily injury if the tripod, tower, or attachments you are installing, constructing, using, or maintaining, or a tool, stake, or anchor, come in contact with overhead or underground utility lines.
- Maintain a distance of at least one-and-one-half times structure height, 20 feet, or the distance required by applicable law, **whichever is greater**, between overhead utility lines and the structure (tripod, tower, attachments, or tools).
- Prior to performing site or installation work, inform all utility companies and have all underground utilities marked.
- Comply with all electrical codes. Electrical equipment and related grounding devices should be installed by a licensed and qualified electrician.

Elevated Work and Weather

- Exercise extreme caution when performing elevated work.
- Use appropriate equipment and safety practices.
- During installation and maintenance, keep tower and tripod sites clear of un-trained or nonessential personnel. Take precautions to prevent elevated tools and objects from dropping.
- Do not perform any work in inclement weather, including wind, rain, snow, lightning, etc.

Maintenance

- Periodically (at least yearly) check for wear and damage, including corrosion, stress cracks, frayed cables, loose cable clamps, cable tightness, etc. and take necessary corrective actions.
- Periodically (at least yearly) check electrical ground connections.

WHILE EVERY ATTEMPT IS MADE TO EMBODY THE HIGHEST DEGREE OF SAFETY IN ALL CAMPBELL SCIENTIFIC PRODUCTS, THE CUSTOMER ASSUMES ALL RISK FROM ANY INJURY RESULTING FROM IMPROPER INSTALLATION, USE, OR MAINTENANCE OF TRIPODS, TOWERS, OR ATTACHMENTS TO TRIPODS AND TOWERS SUCH AS SENSORS, CROSSARMS, ENCLOSURES, ANTENNAS, ETC.

Datalogger RF407-Series Spread Spectrum Radio Option

1. Introduction

This manual discusses the RF407-series frequency-hopping spread-spectrum (FHSS) radio option for the CR6-series and CR300-series dataloggers. This manual will refer to these dataloggers collectively as "CRX-RF407." Throughout the manual CRX-RF407 can be replaced with any datalogger and radio option, unless otherwise noted. The standalone radios (that is, not the dataloggers with the radio option) will be referred to collectively as "RF407." Throughout the manual RF407 can be replaced with RF412 or RF422, unless otherwise noted.

NOTE The radio options cannot be mixed. A CRX-RF407 can only be used with other CRX-RF407s and RF407s. A CRX-RF412 can only be used with other CRX-RF412s and RF412s. A CRX-RF422 can only be used with other CRX-RF422s and RF422s.

These dataloggers are designed for license-free use in several countries:

- The RF407 option has a 902 to 928 MHz operating-frequency range appropriate for use in the United States and Canada (FCC / IC compliant).
- The RF412 option has a 915 to 928 MHz operating-frequency range appropriate for use in Australia and New Zealand (ACMA compliant).
- The RF422 option has an 863 to 873 MHz operating-frequency range appropriate for use in most of Europe and some of Asia (ETSI compliant).

A CRX-RF407 can be used with an RF407 at a base computer to establish communication between *LoggerNet* and the CRX-RF407. A CRX-RF407 can also be part of a new or existing RF407 network.

This document describes how to set up a simple base RF407 to remote CRX-RF407 network. It also describes how to extend that system to include more CRX-RF407s and how the CRX-RF407 can be used in combination with other communication methods.

A CRX-RF407 contains the same radio as a standalone RF407. Most of the radio settings are the same for the CRX-RF407 and the RF407. See the *RF407-Series Spread Spectrum Radios manual* for more information on specifications and radio communication using the CRX-RF407.

NOTE This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his or her own expense.

2. Communication Setup

2.1 Basic Procedure: PC with RF407 to CRX-RF407

NOTE

This procedure assumes the RF407 and the CRX-RF407 are in their Factory Default settings.

Click the *Device Configuration Utility* icon on the PC.

Device Configuration Utility (*DevConfig*) opens.

In *DevConfig*, select **Device Type** | **Radio** | **RF407 Series**.

DevConfig displays RF407 series information in the right pane.

Use *LoggerNet Connect* to connect to the datalogger, send programs, and view and collect data.

2.2 PC with RF407 to Multiple CRX-RF407s

The Basic Procedure can be extended to include multiple CRX-RF407s in the system.

default PakBus address of 1. For this reason, it is best not to assign PakBus address 1 to any device in the network. Then, if a new device with default settings is added to the system, it will not create a conflict.

These unique PakBus® addresses must be entered on the **Datalogger Settings** tab of the *LoggerNet EZSetup Wizard*. This change is to make the software settings (*LoggerNet*) match the change we made in the hardware settings using *DevConfig*.

	EZSetup Wizard - CR6Serie	es_3 (CR6Series)

Once you have used the *EZSetup Wizard* to add all of the dataloggers in your network, they will all appear on the *Setup* screen.

2.3 CRX-RF407 as a Router

The previous procedure can be extended to use one CRX-RF407 as a router in the network to go around an obstacle such as a hill or to reach longer distances.

This requires only a few changes to the previous procedure.

First, use *DevConfig* to connect to the CRX-RF407 that will be used as a router. On the **Com Ports Settings** tab, set **Select the ComPort** to **RF**. Set the **Beacon Interval** to **60** seconds (or the amount of time you are willing to wait for the leaf dataloggers in the network to be discovered) and the **Verify Interval** to something slightly greater than the expected communication interval between the router and the leaf dataloggers in the network. For example, the following screenshot shows the **Verify Interval** set to **90** seconds.

2.4 Communication Combinations

The CRX-RF407 can be used in a system with multiple communication methods. For example, in the figure below, the router CRX-RF407 communicates with *LoggerNet* through an RV50 cellular modem connected to the CRX-RF407 using a CPI/RS-232 Data Cable. (An Ethernet connection could also be used between the RV50 and the CRX-RF407. See the RV50 manual for more information.) The router CRX-RF407 communicates with the leaf CRX-RF407s through RF.

The RF portion of this network requires no changes to the hardware settings described in the previous procedure (Section 2.3, *CRX-RF407 as a Router (p. 16)*). See the manual for the communication product being used in combination with the CRX-RF407 (in this example, the RV50) for information on setting up *LoggerNet* to communicate with the router CRX-RF407.

2.5 Network Planner

For more complicated networks, *LoggerNet Network Planner* is recommended for the network setup. Select devices from the **Device Palette** and place them on the drawing canvas. Use the link tool to draw lines indicating the communication links between devices. Use the activity tool to indicate activities that will take place between devices.

Network Planner calculates the optimum settings for each device in the network and allows you to send these settings to the device. If any change is made to a device in the network, that change is propagated to every affected device setting. *Network Planner* can then use the information entered to configure *LoggerNet Setup*.

Refer to the Network Planner help for more information.

3. Troubleshooting

If there are intermittent communication problems with the above setups, there may be another network in the area causing interference. To help remove the interference, use *DevConfig* to change the **Network ID** and **RF Hop Sequence** in all RF407s and CRX-RF407s to a different value. Each of these settings must have the same value in all RF407s and CRX-RF407s. For example, the **Network ID** in all devices could be set to **1726**, and the **RF Hop Sequence** in all devices could be set to **1726**, and the **RF Hop Sequence** in all devices could be set to **1726**. The **RF Hop Sequence** can be any number between 0 and 32767. The **RF Hop Sequence** can be any number between 0 and 7 in an RF407 or RF412 network; it can be any number between 0 and 9 in an RF422 network.
