RE: Discontinuation Notice for CR5000

Dear Customers,

Overview

Please be advised that Campbell Scientific's CR5000 Measurement & Control Datalogger product has been discontinued. As of 6 August 2013, the CR5000 will no longer be manufactured due to component obsolescence.

The CR5000 was first introduced in January 2000. For 13 years it has been a highly useful, mainstream product in the test and measurement industry, as well as the environmental high-speed data acquisition market.

Support and Maintenance

As with other discontinued datalogger products, Campbell Scientific will continue to provide customer support and repair services for the CR5000 for many years to come.

Product Migration Options

There is no direct replacement for the CR5000. However, the CR3000 is often a capable substitute. For high-speed applications, the CR9000X may be used. We plan to bring data logging options to market, beginning in 2014, which will meet or exceed the specifications of the CR5000. Please contact a Campbell Scientific applications engineer to select the best datalogger for your needs and to formulate a migration plan.

Sincerely,
Kevin Rhodes
Datalogger Product Manager
