

New Product Release

FOR IMMEDIATE RELEASE

### **New High-Accuracy Submersible Pressure Transducers**

LOGAN, Utah (April 5, 2010) – Campbell Scientific, with 35 years of world-class measurement experience, is pleased to announce a new high-accuracy version of their CS450-L and CS455-L submersible pressure transducers.

The new transducers measure pressure with a static accuracy within  $\pm 0.05\%$  FS over a  $0^{\circ}\text{C}$ -to- $60^{\circ}\text{C}$  temperature range in all pressure ranges from 0-7.25 psig (0-50 kPa) to 0-145 psig (0-1000 kPa). In the lowest pressure range, 0-2.9 psig (0-20 kPa), static accuracy is  $\pm 0.1\%$  FS. The CS450-L/CS455-L can output either an SDI-12 or RS-232 signal interface to Campbell Scientific dataloggers or other recording devices.

The CS450-L and CS455-L consist of a piezoresistive sensor housed in a metal case. The CS450-L has a 316L stainless steel case that can be submerged in most canals, wells, ponds, lakes, and streams. The CS455-L has a rugged titanium case that allows it to be used in saltwater or other corrosive environments. The transducers have a rugged Hytrel cable that remains flexible, even under harsh environmental conditions. The cable incorporates a vent tube to compensate for atmospheric pressure fluctuations. An NTP fitting allows the CS450-L and CS455-L to be used in closed-pipe applications.
