Overview
Campbell Scientific’s BP12, BP24, and PS24 are 12 Vdc power supplies intended for systems with above-average power requirements. The BP12 rechargeable battery has a 12 Ah rating. The BP24 rechargeable battery and PS24 power supply have a 24 Ah rating.

Technical Description

12 Vdc Sealed Rechargeable Batteries
The BP12 and BP24 consist of a sealed rechargeable battery, two battery cables, and hardware for mounting the battery in an enclosure. One of the cables terminates in a connector for attachment to a Campbell Scientific regulator, and the other cable terminates in stripped and tinned leads for attachment to the CR6 datalogger’s onboard regulator. When used outdoors, the BP12 or BP24 and regulator need to be housed in a larger environmental enclosure (ENC16/18, ENC24/30, or ENC24/30S).

Regulators
The regulator controls the current flowing to the battery and prevents the battery current from flowing to the charging source. Our CH150 and CH200 regulators are microcontroller-based smart chargers with temperature compensation that optimize battery charging and increase the battery’s life.

The CH150 is for standard applications. The CH200 includes RS-232 and SDI-12 terminals that allow a datalogger to monitor various input, output, and status parameters.

Integrated Power Supply
The PS24 is for situations where it is desirable to have the power supply housed in a separate enclosure. The PS24 consists of a 24 Ah battery, either the CH150 or CH200 regulator, and a 10 by 12 inch environmental enclosure. Several options are offered for mounting the enclosure to a tripod or tower.

Charging Sources
Several wall chargers and solar panels are available for recharging the sealed rechargeable battery (see Ordering Information). Solar panels charge batteries by converting sunlight into direct current. Wall chargers use power from external ac power lines to recharge the batteries.

Adapters
Campbell Scientific offers two adapters that fasten onto our CH200 and CH150. The A100 allows the CH200 or CH150 to power peripherals and external devices at nondatalogger sites such as repeater stations. The A105 adapter increases the number of 12 V and ground terminals available on the CH200 or CH150. The A100 and A105 cannot be used at the same time.

PS24 Enclosure

- Internal Dimensions: 25.4 x 30.5 x 11.4 cm (10 x 12 x 4.5 in)
- Rating: NEMA 4X (modified for cable entry)
- Color: White

*Specifications for the regulators are provided in the PS150 and CH150 Power Supply and Charge Controller product brochure, and the PS200 and CH200 Smart Power Supply and Charge Controller product brochure.
