

RTMCRT

Real-Time Monitor and Control Software, Run-Time Version

Overview

Current Version: 5.0

RTMCRT is intended for applications in which several remote PCs need to display the same real-time data in the same

format. Remote PCs running RTMCRT can view and print RTMC projects created in the RTMC developer. One copy of RTMCRT is included with the purchase of LoggerNet or RTDAQ data logger support software. It is also sold independently for customers who need copies for remote computers.

Benefits and Features

- › Allows you to run the real-time graphic display screen created in the RTMC developer
- › Displays real-time data
- › Automatically updates display screens

Detailed Description

RTMC projects developed in the standard RTMC application or RTMC Pro are run using RTMC Run-Time. RTMC Run-Time is included with LoggerNet, LoggerNetAdmin, LoggerNetData, RTDAQ, and RTMC Pro. Additional RTMC Run-Time versions can be purchased separately and installed on computers that are networked to a LoggerNet computer. This allows remote PCs to display data in a graphical format from a LoggerNet server.

As LoggerNet collects data from the data logger, the displays in RTMC Run-Time are automatically updated. RTMC Run-Time also allows the user to change public variable values or input locations, as well as toggle ports/flags if those capabilities were enabled in the RTMC project during development.

For best performance, RTMCRT version 4.x should run projects developed in RTMC version 4.x development tools (standard RTMC Development or RTMCPro).

Specifications

Current Version	5.0	Operating System	Windows 11 or 10 (32- and 64-bit operating systems are supported.)
-----------------	-----	------------------	--

Requirement

Requires a licensed copy of
LoggerNet, LoggerNetAdmin, or

RTDAQ running on PC.
