Overview
The SkyVUE™8M Tactical LIDAR Ceilometer is ideal for quick tactical deployment (for permanent or temporary installation) for military or civilian applications in all climates.

The ceilometer's robust construction requires minimal maintenance and enables continuous use and multiple deployments in the harshest of environments. Designed to be easily portable, the SkyVUE™8M has unique quick-deploy stabilizing legs, low weight, and a compact design with a beige finish and two canvas covers to suit all applications.

The SkyVUE™8M has many standard features, including a tilting base, a two-axis inclinometer for automatic correction of cloud heights, heaters, blowers, and a sun filter for operation under all conditions—making deployments possible around the world.

The SkyVUE™8M has an operating range of 8 km and meets or exceeds all the necessary ICAO, CAA, and WMO requirements and recommendations.

Unique standard features include an easy-to-operate stratocumulus calibration and twin clocks to augment its many continuous diagnostic self-checks and provide assurance of continuous, reliable, and accurate performance.

Benefits and Features
- Single-lens design for high signal-to-noise ratio and maximized detector sensitivity, resulting in greater performance at low and high altitudes
- Low weight and small form factor for maximum portability
- Quick-deploy stabilizing legs
- Multiple camouflage options with shroud
- Low power consumption with multiple power options
- Unique continuous comparison of two separate internal quartz clocks to eliminate possibility of clock drift, ensuring measurement confidence
- User-friendly stratocumulus calibration capability and easy test with provided calibrator plate for easy field setup and calibration

Detailed Description
The SkyVUE™8M LIDAR ceilometer measures cloud height and vertical visibility for aviation and meteorological applications.
Using LIDAR (LIght Detection And Ranging) technology, the ceilometer transmits fast, low-power laser pulses into the atmosphere and detects backscattered returns from clouds and aerosols above the instrument.

A unique, efficient single-lens design increases optical signal-to-noise ratio and allows for larger optics in a compact package, improving accuracy and measurement performance.

This approach, along with state-of-the-art electronics, provides a powerful and stable platform from which to measure cloud height and vertical visibility to high accuracy. The SkyVUE™8M measures the atmosphere with high stability and repeatability, delivering excellent performance in even the harshest of conditions.

The SkyVUE™8M provides information on cloud height, sky condition (up to five layers), vertical visibility, and raw backscatter profiles to a range of 8 km.

### Specifications

<table>
<thead>
<tr>
<th>Dimensions</th>
<th>763 x 360 x 253 mm (30.0 x 14.2 x 10.0 in.) including base and handle</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weight</td>
<td>18 kg (39.7 lb) excluding cables</td>
</tr>
</tbody>
</table>

#### Instrument Performance

- **Reporting Range**: 0 to 8 km (0 to 26,250 ft)
- **Minimum Reporting Resolution**: 5 m (16.4 ft)
- **Hard Target Range Accuracy**: ±0.25%, ±4.6 m (15.1 ft)
- **Reporting Cycle**: 2 to 600s
- **Cloud Layers Reported**: Up to four layers (up to five layers in Sky Condition)
- **Sky Condition**: Up to five layers with cover in oktas according to WMO requirements for SYNOP and METAR codes as standard

- **Laser Type**: InGaAs
- **Laser Wavelength**: 912 nm (±5 nm)
- **Military Specification**: DEF STAN 00-035 (for resistance to shock and vibration)
  - MIL-STD-80g (for resistance to shock and vibration)

#### Environmental Specification

- **Temperature Range**: -40° to +60°C (-40° to +140°F)
- **Humidity Range**: 0 to 100% RH
- **IP Rating**: IP66 (NEMA 4X)
- **Maximum Wind Speed**: 55 m/s (123 mph) if securely attached to the ground (without camouflage covers)

#### Compliance and Testing

- **EMC Compliance**: EN 61326-1:2013
- **Electrical Safety Compliance**: EN 61010-1:2010
- **LASER Safety Compliance**: EN 60825-1:2014
- **Eye Safety Standard**: Class 1M
- **Vibration**: BS EN 60068-2-6:2008 Test Fc: Vibration (Sinusoidal)
- **Frequency Range**: 5 to 150 Hz (exceeds Lloyd’s Register test levels)
